ABSTRACT

Placement Hub is a placement management system designed to simplify and streamline recruitment activities in educational institutions. It provides a centralized platform to manage student profiles, company details, recruitment drives, and job opportunities in an organized manner. The system helps the placement cell efficiently maintain placement-related information while reducing manual effort and improving data accessibility.

The proposed system matches students with suitable job opportunities based on their academic performance, skills, and company eligibility criteria. By incorporating **Data Structures and Algorithms (DSA)** such as searching, sorting, and efficient data organization techniques, Placement Hub enables faster retrieval and processing of placement data. The system aims to improve the efficiency of placement management, ensure accurate eligibility checking, and help students discover relevant career opportunities while supporting the placement cell in conducting recruitment drives effectively.
